teamsTALK

Add-in in Outlook

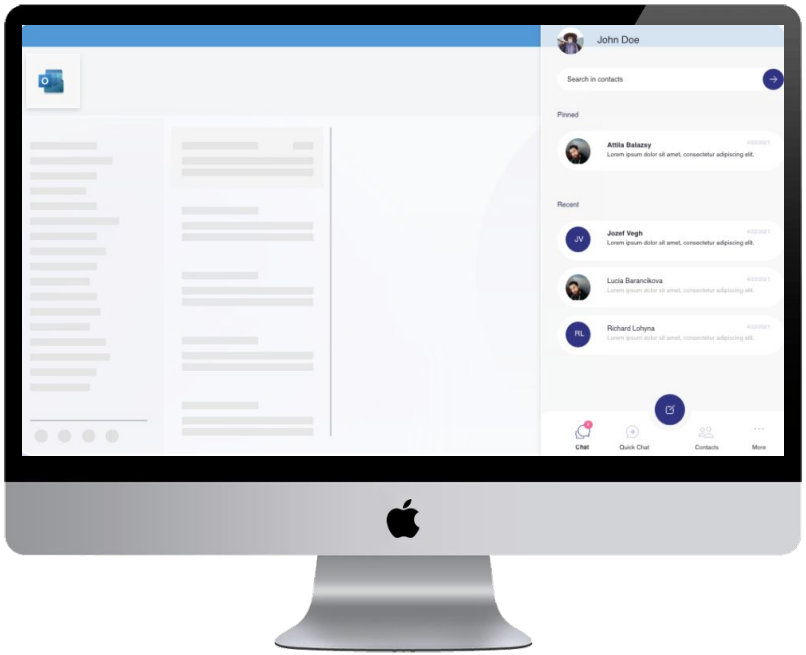
Overview

teamsTALK

is an **Add-in in Outlook** which can provide an integration between Outlook and MS Teams App..

The teamsTALK provides the feature to create a new chat group with one simple click in user's Outlook and to chat inside it.

This ensures that the user need not to switch between their Outlook and MS Teams app. Hence it displays all the Teams chats automatically in it.



Technical Implementation

- Team TECH-ARROW is an established company who offers the best solutions for data archiving and email archive migrations worldwide.
- Team iView Labs, quickly started exploring their need and proposed that by using **Angular 9+** framework it can be done seamlessly.
- Team iView, successfully met the client expectations in 12 weeks, and provided a viable Add-in for Outlook.
- It was a kind of a challenging task as since the entire application had a narrow window of the deliverable and therefore to get the developers work on to the **Add-in in Outlook** was itself a little off-track and non traditional work. More challenging was to ensure it met all the compliance of the add-in and plug-in on the App Source and MS Store.
